MEMORANDUM

SUBJECT: Martha C. Rose Meeting and Site Visit Oct. 16, 1986

FROM: STEVEN KINSER

TO: CRAIG SMITH

Art Spratlin, Leo Alderman, Ed Skowronski, and I met with representatives of the Missouri Department of Natural Resources and the Missouri Department of Health in Sedalia Missouri in regard to the subject. The primary purpose of the meeting was to bring the State into the picture concerning the actions taking place and planned for the subject site. Art gave a brief background on the activities at the site to date, including a history of the activities leading up to the conditions which resulted in EPA's intervention at the site. Then a current status of the site was provided along with the results of all known sampling which has taken place at the site. A brief discussion concerning the generators role and the activities of Clean Sites was also provided. We next discussed the proposed clean up levels that are currently being considered for use at the site. In general the State was in agreement with the levels that we are currently considering. It was explained that the decision to use the discussed levels had not been made yet. Additional input from CDC will necessary prior to finalization of the clean up levels.

On the return to the RO we stopped by Holden to view the site. A brief tour of the outside of the facility was made. Contract personnel under the direction of Clean Sites were on site sampling for a possible location for a staging area for Chem Waste Management's operations. There was nothing really new to note about the site. A considerable quantity of material from the satellite sites has been staged in the American Steel portion of the building. In the same area the staged sodium drums are clearly visible. We did discuss with Roger Van Zale that we thought that some sampling at depth was in order and he indicated that it has already been considered and will be done.

From conversations with Art and Leo and Roger it appears that it would be fruitful to arrange a joint meeting between EPA legal and technical personnel involved with the site and The Technical Committee and the Legal Committee for the generators as some of the problems being brought up by the Legal Committee members do not appear to be clearly reflected in the attitude of the Technical Committee.
